

The amendment to claim 1 defines the silicon oxide precursor as in claim 11 and deletes a typographical error; support for the first four lines of claim 1 as amended is found on page 8 lines 5-11 of the specification.

Claims 2-4 have been amended to be consistent with claim 1.

Claim 6 has been amended to provide a generic description for the organic phosphite and organic borate accelerants. Support for this claim is found on page 7 lines 11-18 of the specification.

Claims 16 and 17 have been amended to be consistent with claim 1.

Claims 18-20 have been amended to be consistent with claim 1; support is found on page 8 lines 24-32 and in Example 4 on page 13 of the specification.

Claim 21 has been amended to be consistent with claim 1; support is found on page 8 lines 24-32 and in Example 5 on pages 13 and 14 of the specification.

Claim 24 has been amended to be consistent with claims 18 and 1.

Claims 25 has been amended to correct a typographical error (support for this correction is found on page 8, line 7 of the specification) and to define the silicon oxide precursor as in claim 11.

Claim 26 has been edited to be consistent with claim 25.

Claim 27 contains all of the elements defined in separate claims. Thus, the preamble finds support in claims 1, 25 and 26; the tin oxide precursor is defined as in original claim 7; the silicon oxide precursor is defined as in original claim 11; and the phosphite and borate accelerants are defined as set out on page 7 lines 11-18 of the specification.

Claim 28 defines the tin oxide precursor as in original claim 8; defines the silicon oxide precursor as in original claim 11 and defines the accelerant as in original claim 15.

Claim 29 is supported by original claim 24.

By the foregoing amendment Applicants have modified the claims to more particularly point out and distinctly claim their invention. It is therefore urged that all issues in this case have been resolved and that this case is now in condition for allowance.

Respectfully submitted,

Date: October 25, 1994

Stanley A. Marcus
